COMP.3250: Data Analytics I
Group Project: Data Analytics Application – D.3. Project Code

Overview

Please find below details about the third deliverable the project, "D.3. Project Code".

Deliverable D.3 – Project Code

General

The full application code (platform files, programming language code, etc.), executables, and auxiliary content must be delivered.

It must be delivered in the form of a "project", on the respective repository (GitHub, GitLab, Codespaces, for Eclipse, VS Code, etc.) used, or included in the respective platform used for the development (Power BI, Tableau, etc.).

It must be followed by deployment and running documentation (for example, how to connect to the database, if one is used).

Deliverable Details

- Use the Visual Analytics Platform (Power BI (file), Tableau (link to the cloud portal), preferably, or use the code repository (GitHub, GitLab, Codespaces, etc.) used.
  Include the link as your main submission, making sure it is accessible to graders.
- Make the repository (tool cloud instance or GitHub, etc.) the main project portal front end.
- Use the format of a "project", as saved in the file system by your tool.IDE.
- Code:
  - A file (or files), if you are using PowerBI, Tableau, etc.
  - Compiled code and running:
    - Include source code (if another programming language is used as well).
      - Source code (Python or other language).
      - Extended comments must be included in your code.
    - Include the executable files.
    - Include any auxiliary files.
  - Implementation based on the principles discussed in class.
- Include the dataset file you have used.
  Indicate the source from where you downloaded it from.
- Include the database schema (if applicable).
  Include instructions on how to connect to the existing database.

© Dr. Andreas Maniatis – UWindsor - SCS

- **Include the link to the cloud platform used to host the application.**
  Graders should be able to run the application in the platform without installation/configuration.
  For Power BI, just included the respective file(s).
- Any software application and code deliverable must be accompanied by extended documentation. For the project, the following are needed:
  - User Requirements and Analysis Document (3 pages minimum).
  - Design document (3 pages minimum).
  - Deployment document (2 pages minimum).
  - User Guide (2 pages minimum).
  - Note:
    - **These documents need to be submitted as addendums to the D.4. Final Report (Appendices) deliverable**.
    - *The documents above are simpler when using tools like Power BI and Tableau.*
      If this is the case, most of the documentation described above can be included in the delivered application (separate pages, or Tabs).

Project Deadlines

The following table presents the project deadlines:

Date	Task
Friday, February 13th	*D.1. Project Proposal (document)*
Sunday, March 1st	*D.2. Project Certificates (pdf files)*
Monday, March 29th	**D.3. Final application code**
Monday, March 29th	*D.4. Final project report*
Monday, March 29th	*D.5. Project digital presentation*

Project Deliverable Format

Group submissions (only one needed), must include the following components:

1. A Link to the repository of running visual analytics application.
2. Make sure the repository includes all items described in *Deliverable Details*.

Deliverable Submission

- Deliverables must be submitted electronically to the designated Brightspace assignment folder. You will receive a grade of zero for this assignment if you fail to submit via the Brightspace dropbox created for this purpose.
- Only one submission is required from each group.

© Dr. Andreas Maniatis – UWindsor - SCS

- Each group member is expected to have contributed equitably to the completion of this assignment.
- Grades assigned to individual group members may be adjusted to reflect the actual evaluation of their performance, following a peer review by the graders.

Grading Rubric

The following table presents the grading Rubric for the current deliverable[1]:

Item	Grade (%)
Link to an active cloud platform (for example, Tableau Cloud) Link to the code repository (for Python, Java, etc.)	5%
Full source code: - Tableau and Power BI): Files, including dataset - Coding : ○ Extended in-code commenting (Java, Python, etc.) - Database instance (if applicable)	10%
Fully working executables: - In accordance with the Project Proposal - In accordance with the User Requirements (UR) document	10%

- Active Cloud Platform:
  ○ Tableau
- Power BI:
  ○ File(s)
- Other programming Languages (Python, Java, etc.):
  ○ Application installed and ready to run.
  ○ Running application (in accordance with the Project Proposal and the User Requirements (UR) document)
	15%

D.3. Total	**40%**[2]

[1] Please note that incomplete submissions will not be graded. Also, in preparing your submission files you must abide by University of Windsor policies governing plagiarism and academic integrity. Submissions may be subjected to review by automated tools to verify their originality.

[2] This percentage refers to the specific group project deliverable only.
